## **MedAware Systems 2014 Milestones and 2015 Outlook**

MedAware Systems Inc. announced today a recap of its 2014 accomplishments. The Company successfully completed two rounds of funding to complete key elements of its business plan and strategy. The Company filed a provisional patent (which is being continuously updated before its final publication in March 2015), expanded its software development team, expanded its team of Medical Data Analysts, completed its first prototype, and a substantial portion of the Beta version of the service, scheduled for extensive field testing 1st quarter 2015.

Part of the Beta development has been the finalization of a critical component for data analysis. Founder, Dr. Zung Vu Tran, one of the world's foremost biostatisticians, completed the methodology by which MedAware Systems' service will compare study results across numerous studies. This breakthrough has resulted in the healthcare industry's first standardized Cognitive Assessment Scale. Over 100 different cognitive testing scales used in the diagnoses and treatment of dementia are now standardized in a single scale, allowing medical professionals and their patients to reliably and accurately compare the results of one scientific study to the next, even though those studies used quite different measurement scales for outcomes. The methodology is extensible across all medical fields.

For 2015, the Company executed an agreement with W.G. Nielsen, an independently owned FINRA investment banking firm and the dominant investment banking firm in the Rocky Mountain region to seek institutional capital for completion of the service scheduled for summer 2015. Since W.G. Nielsen's inception in 1996, they have completed transactions valued in excess of \$4 billion, with a strong emphasis in healthcare.

The Company is also preparing a primary listing on the Canadian Securities Exchange in Toronto and a secondary listing on the Frankfurt Stock Exchange. The initial phase of this strategy is to execute a PIPE (Private Investment in Public Equity) through a network of investors in Canada and Europe. MedAware Systems Inc. is anticipating public trading of its stock early 2<sup>nd</sup> quarter, 2015.

"We are looking forward to a very successful 2015, beginning with raising the capital needed to get our service to market by this summer", says Michael Willis, CEO. "We are implementing a detailed hiring, marketing, and sales plan and are confident that we will meet the goals we set", he adds.

### **ABOUT MEDAWARE SYSTEMS, INC.**

MedAware Systems, Inc., based in Broomfield Colorado, is developing the world's first database of all available medical research information where data have been extracted, normalized and standardized to provide fast and highly accurate search and retrieval of evidence-based medical treatments and outcomes. With data precisely filtered by patient profile and disease this subscription service will eliminate today's cumbersome, time-consuming, and highly inaccurate keyword searches. The service also offers instant meta-analysis of data across numerous studies, providing users information from tens, hundreds, or thousands of studies in minutes.
