MedAware Systems' Third Financing Round Successfully Closes

November 28, 2016 - Broomfield, Colorado

MedAware Systems, Inc. announced today it has successfully completed its third Angel financing round.

The Company filed its Form D with the SEC, announcing the completion of its recent \$2M raise. Proceeds were directed toward finalizing and launching the Pilot version of its Science of Health Informatics (SOHInfo) subscription medical data service, as well as to launch MedAware Systems *Analytics*, the Company's Systematic Literature Review and Meta-Analysis service for Pharma and medical device companies.

The Company's first customers for its new *Analytics* services include Nestlé Health Science, Fresenius Kabi, and SI-Bone. MedAware Systems is in discussion with Baxter and other Pharma and medical device giants to provide them the most complete and granular meta-analysis available.

"We are pleased to have successfully completed this round of financing and to have significantly advanced our Scientific-Data-as-a-Service (SDaaS)[™] in two new areas", said Michael Willis, CEO of MedAware Systems. He adds, "It is evident that not only clinicians but Pharma and medical device companies clearly recognize the tremendous value of our data services. While better patient outcomes have long been our focus, we also see tremendous value in leveraging our software tools, processes, and people to provide the most comprehensive meta-analysis of product safety and efficacy. The speed to complete and the granularity of our analysis helps our corporate customers provide the best evidence on their products to meet regulatory and competitive needs. We are now well positioned to commence our Series A financing."

ABOUT MEDAWARE SYSTEMS, INC.

MedAware Systems, Inc. disrupts the health informatics industry by forever changing the way physicians, researchers, payers and consumers derive usable, accurate evidence from published clinical trials research. The Company aggregates, organizes, and standardizes the vast body of human clinical trials research to provide instant, comprehensible, and indispensable information for the patient plan of care as well to address regulatory and competitive requirements for product safety and efficacy.
