MedAware Systems Dementia Research Database Pilot In Use Worldwide

August 27, 2018 - Broomfield, Colorado

MedAware Systems, Inc. announced today that the pilot of the Company's Science of Health Informatics (SOHInfo)[™] subscription service for Dementia is being used by researchers, scientists, and physicians at the Mayo Clinic, Mount Sinai Health System, Stanford University, The University of Pennsylvania, Florida Atlantic University, Texas A&M Health Science Center, McGill University, and other prominent research institutions. This comprehensive dementia research data application is also being piloted by scientists at pharmaceutical companies, including Eisai, Accera, KalGene, Avid, and others.

SOHInfo provides millions of data points from over 10,000 dementia studies to support research on Alzheimer's disease and other forms of dementia. This massive amount of data has been organized and standardized for instant analysis. SOHInfo Dementia enables Alzheimer's research organizations and pharmaceutical companies to accelerate work in developing treatments for Alzheimer's disease and other forms of dementia.

The data set is the world's largest body of evidence in this critical healthcare area and is delivered with a wide array of tools for users to rapidly explore and analyze all available scientific evidence from published research studies. This information will serve to improve and streamline the design of long term treatments and care strategies, targeted for specific patient cohorts.

"The database covers a remarkable breadth and depth of research data on all forms of dementia," says Michael Willis, CEO. He continues, "We are excited to be offering such an invaluable resource to esteemed institutions and pharmaceutical companies. Dementia, and in particular Alzheimer's disease, is a devastating health problem. We are proud to be an important contributor in the fight to find effective treatments for patients, worldwide."

ABOUT MEDAWARE SYSTEMS, INC.

MedAware Systems, Inc. disrupts the health informatics industry by forever changing the way Pharma and medical device companies, physicians, payers and patients derive usable evidence from published clinical trials research. The Company's *Science of Health Informatics* (SOHInfo[™]) is a Scientific-Data-as-a-Service (SDaaS[™]) that solves the problem of making the vast and chaotic body of clinical science research instantly available and indispensable for understanding the safety and efficacy of medical treatments and devices.
